Breaking the Myth of the “Non-Traditional” Physicist

The Real Story About Employment for Physics Graduates

APS Division of Particles and Fields Meeting
August 4 – 8, 2015
Ann Arbor, MI

Crystal Bailey
American Physical Society

bailey@aps.org
Who is a Physicist?

Anyone with a Physics Degree

- BS
- BA
- MS
- PhD, etc.

Why?

- Definition is consistent with other disciplines (e.g. Chemistry)
- Defines a common set of experiences (and texts)
- Inclusive view is better for survival of discipline

What makes them Physicists?

Shared experiences creates familiarity—not only with the same Physics concepts, but also with the culture of the discipline.

However, most importantly, even a basic Physics training imparts essential problem solving skills—“how to think”—which is the hallmark of a physicist.
Where do Physicists Work?

Not where you think!

What is a “traditional physicist”? A physics professor? A PhD researcher? The “most common” career path?

The AIP Statistical Research Center estimates that 1 in 6 physics bachelors will choose to finish a Physics PhD.

So ~17% of all Physics Degree holders will actually become Physics PhDs—and by extension “traditional physicists.”
At the time of the 2014 report, the AIP Statistical Research center found the number of physics PhDs conferred in the US to be the highest in the past century: 1,762.

Based on current enrollments, we should expect PhD degree production to level off at around 1,700/year in the next four years.

Bottom line: the US can expect to continue putting large numbers of Physics PhDs into the workforce.
The largest percentage of Physics PhDs found initial employment in Postdoctoral and other temporary positions...

...but the vast majority of permanent jobs were in the private sector.

www.aps.org/careers

bailey@aps.org
The majority (88%) of graduates who initially go into the academic sector are postdocs or temporary faculty.

Most postdocs go into their positions in the hopes of moving toward permanent employment.

In fact, research shows that at PhD granting universities, previous experience as a postdoc (or as faculty) is a strong indicator of the likelihood of becoming a faculty hire.

At the same time, becoming a new faculty hire with only a graduate degree is extremely unlikely—even at Bachelor’s granting universities.
Yet the number of departures of tenured and tenure-track faculty has changed little since 2003.

“While there were about 350 departures by tenured and tenure-track faculty during the 2006-2007 academic year...there were 475 recruitments for the same time frame, with 342 tenured and tenure-track faculty members hired in 2007-2008; this... is consistent with what we have seen in prior years.”

--Focus on the Faculty Job Market in Physics and Astronomy Departments,
AIP Statistical Research Center
Not all faculty positions are created alike.

• The type of faculty position varies widely according to institution.

• Many individuals who do get new faculty positions will spend time waiting for a desired situation to open up.

Bottom Line: the job market for faculty in universities and other institutions is very stable.

“Stable” means that overall, not many jobs are being lost. At the same time, not many are being created, either.

Given that we are graduating over 1,700 PhDs/yr, with more than half of them going into postdocs with an intention of continuing as physics faculty, supply will continue to outweigh demand for the tenure-track academic career path.
PhD Employment in the Private Sector

Recall that the majority (64%) of graduates who initially went into permanent employment positions were in the private sector.

According to the NSF Survey of Doctoral Recipients, in 2010 the private sector was the largest single employment base of Physics PhDs: about 47% (the next highest was 4 year colleges, at 38%).

This was also true in 2001, when the private sector employed 46% of Physics PhDs\(^1\)…

…and was also true in 1993, when the private sector again employed 46% of Physics PhDs\(^2\).

In fact, the same data has shown consistent support for Physics PhDs in the private sector since 1971.

\textbf{Industry has been the largest employment base for Physics PhDs for decades.}

\(^1\) NSF Survey of Doctoral Recipients, 2001

\(^2\) NSF Integrated Survey Data, 1993
Not only does the private sector provide the largest number of jobs for physics PhDs, it also provides the highest-paying jobs, with a median starting salary over $90K.

By comparison, average typical starting salaries at Universities and 4-year colleges is around $50K...

...and a University postdoc position typically offers between $40K and $50K.

**So, the private sector also offers well-paying employment to Physics PhDs.**

www.aps.org/careers

---

Starting Salaries for Physics PhDs, Classes of 2011 & 2012 Combined

**Potentially Permanent Positions**

- Government Lab (N=17)
- Private Sector (N=127)
- University & 4-year College (N=42)

**Postdocs**

- Government Lab (N=86)
- University & UARI (N=386)

Data only include US-educated PhDs who remained in the US after earning their degrees. The ranges of salaries represent the middle 50% i.e. between the 25th and 75th percentiles. Government Lab includes Federally Funded Research and Development Centers, e.g. Los Alamos National Laboratory. UARI is University Affiliated Research Institute. The data for PhDs holding potentially permanent positions in academia include salaries based on the 9-10 and 11-12 month commitments. “N” represents the number of individuals who were full-time employed and provided salary data.

bailey@aps.org
But Won’t I Lose My Soul if I Go Into Industry?

NO!

Types of Positions Accepted by Private Sector Hires, 2011-2012

- Physics Research, Different Subfield then Dissertation (44%)  
- Physics Research, Same Subfield as Dissertation (27%)  
- Different Field than Physics (29%)

Less than half of graduating PhDs found employment in fields such as Engineering, Business and Finance, Education, or Medical Services.

But the majority of physics PhDs who accepted employment in the private sector were doing physics research, either in or out of their dissertation subfield.
What about the non-PhD physicists?

According to the AIP Statistical Research Center, 83% of physics bachelors will not earn a Physics PhD.

- Roughly one-third to one-half of Physics Bachelors will go straight into the workforce, mostly in STEM fields.
- Another third will go into graduate study in Physics and Astronomy.
- And the remainder will go into graduate study in other fields—including finance, law, and Medical Physics.

What types of employment are possible for these degree paths?
Master’s Degrees

Between 2009-2011, about 50% of physics masters recipients entered or remained in the workforce.

- High School teachers taught Physics, Chemistry and Math
- Salaries for those continuing employment after earning their MS were $13,000 more than new hires

- Typical titles include adjunct faculty (2 yr. colleges), lab manager, and research assoc.
- Median Starting Salary: $38,500

- Almost entirely STEM occupations
- Mostly management-level positions
- Median Starting Salary: $60,000

- Positions mostly at National Labs, Armed Service Branches, or Trademark Office
- Median Starting Salary: $57,000

www.aps.org/careers

bailey@aps.org
Not surprisingly, physics master’s degree holders working in the private sector earned considerable more than their colleagues at colleges and universities.

MS grads who earned their degree while working in the private sector earned considerably more (~$83K).

A physics master’s degree will open the door to more advanced positions in a variety of technical fields, with higher salaries.

http://www.aip.org/statistics
Physics Bachelors in 2009-10 found initial employment in a variety of areas.

Over half of physics bachelor’s degree recipients in 2009-2010 found work in the private sector.

*Data does not include degree recipients from the three military academies (US Naval Academy, US Military Academy, US Air Force Academy).

**Data include two- and four-year colleges, universities, and university affiliated research institutes.
Physics Bachelors in the Private Sector

Of these, many went into engineering or computer science.

A significant portion went into “non-STEM” fields.

Physics bachelors are highly employable, in a variety of career paths.

STEM refers to natural science, technology, engineering, and mathematics.

http://www.aip.org/statistics

www.aps.org/careers

bailey@aps.org
A physics bachelor’s degree now ranks higher in starting salary than many other technical fields (including mechanical engineering).

The typical starting salary for a physics bachelor degree has increased by nearly $10,000 since 2003.
Physics Workforce: Summary

- Faculty positions are NOT the most common career path for physicists!
- Industry is the largest employment base for Physics PhDs...
  ...and for Physics Masters.
  ....and Physics Bachelors.

Your career path will not be a straight line...

Smart planning requires being aware of—and prepared for—all possibilities.

There is a lot of great science to be done—and opportunities to be found—in a lot of places!

APS Can Help You Discover Your Path

APS Online Professional Development Guide

• Features 5-minute “webinette” clips from the top APS careers webinars.
  – APS webinar “Putting Your Science to Work,” with Peter Fiske
  – APS webinar “Career Self-Advocacy: How I Got A Six Figure Job in the Private Sector,” with Meghan Anzelc
  – APS Webinar “Networking at APS Meetings”

• Topics include self-assessment, networking, interviewing and negotiation strategies, and more.

http://go.aps.org/physicspdguide

www.aps.org/careers

bailey@aps.org
APS Careers Website

• Library of Physicist Profiles
  – Advice from physicists representing a diversity of degree paths and careers.

• Job Prospects Pages
  – Profiles feature the most common career paths for physicists.
    – Include descriptions of day to day activities, additional skills and training needed, salary information, job outlooks, and links to other relevant resources.

• Physics Employment and Salary Information
  – Clearing house for most recent physics employment data from AIP SRC
  – Thumbnails and links to full reports for more information

• APS Webinars Archive
  – On-demand viewing for all webinar presentations
APS Local Links

• Locally based, grassroots gatherings of students and physicists.
• Focus on students and physicists working in academia, industry, and national labs.
• Groups meet about every 6-8 weeks, usually in a pub or restaurant (“neutral ground”).
• Goal is to build mutually beneficial relationships, raise awareness of non-academic careers, and promote recruitment of student and postdocs into industries.
• Current sites include:

  – Austin
  – Boston
  – DC - Baltimore
  – Denver - Boulder
  – Silicon Valley
  – St. Louis
  – Tampa Bay - Orlando

http://go.aps.org/local_links
APS Job Board

Shared database (Physics Today, IEEE Computing, AVS, and others) means that there are hundreds of jobs available on the site right now.

Job Seekers can:

• Search for jobs on the Job Center (totally free).
• Store your resume, cover letters, and other materials in your profile on the site.
• Apply for positions directly through the Job Center.

Panels and Networking Opportunities at APS Meetings

• Career Workshops
• Industrial Careers Workshop at APS March 2015 Meeting
• Graduate Student “Lunch with the Experts”
• Career Panel and Networking Reception

www.aps.org/careers

bailey@aps.org
Remember:

• Academic Physics is not the most common path!
  – *Most* physics grads at all degree levels go into the private sector.
  – Many of those who do (especially at the PhD level) will do scientific research.

• Plan Effectively by Broadening Your Focus
  – Use your resources to learn about career paths outside of academic physics.
