

HAWC/Nova

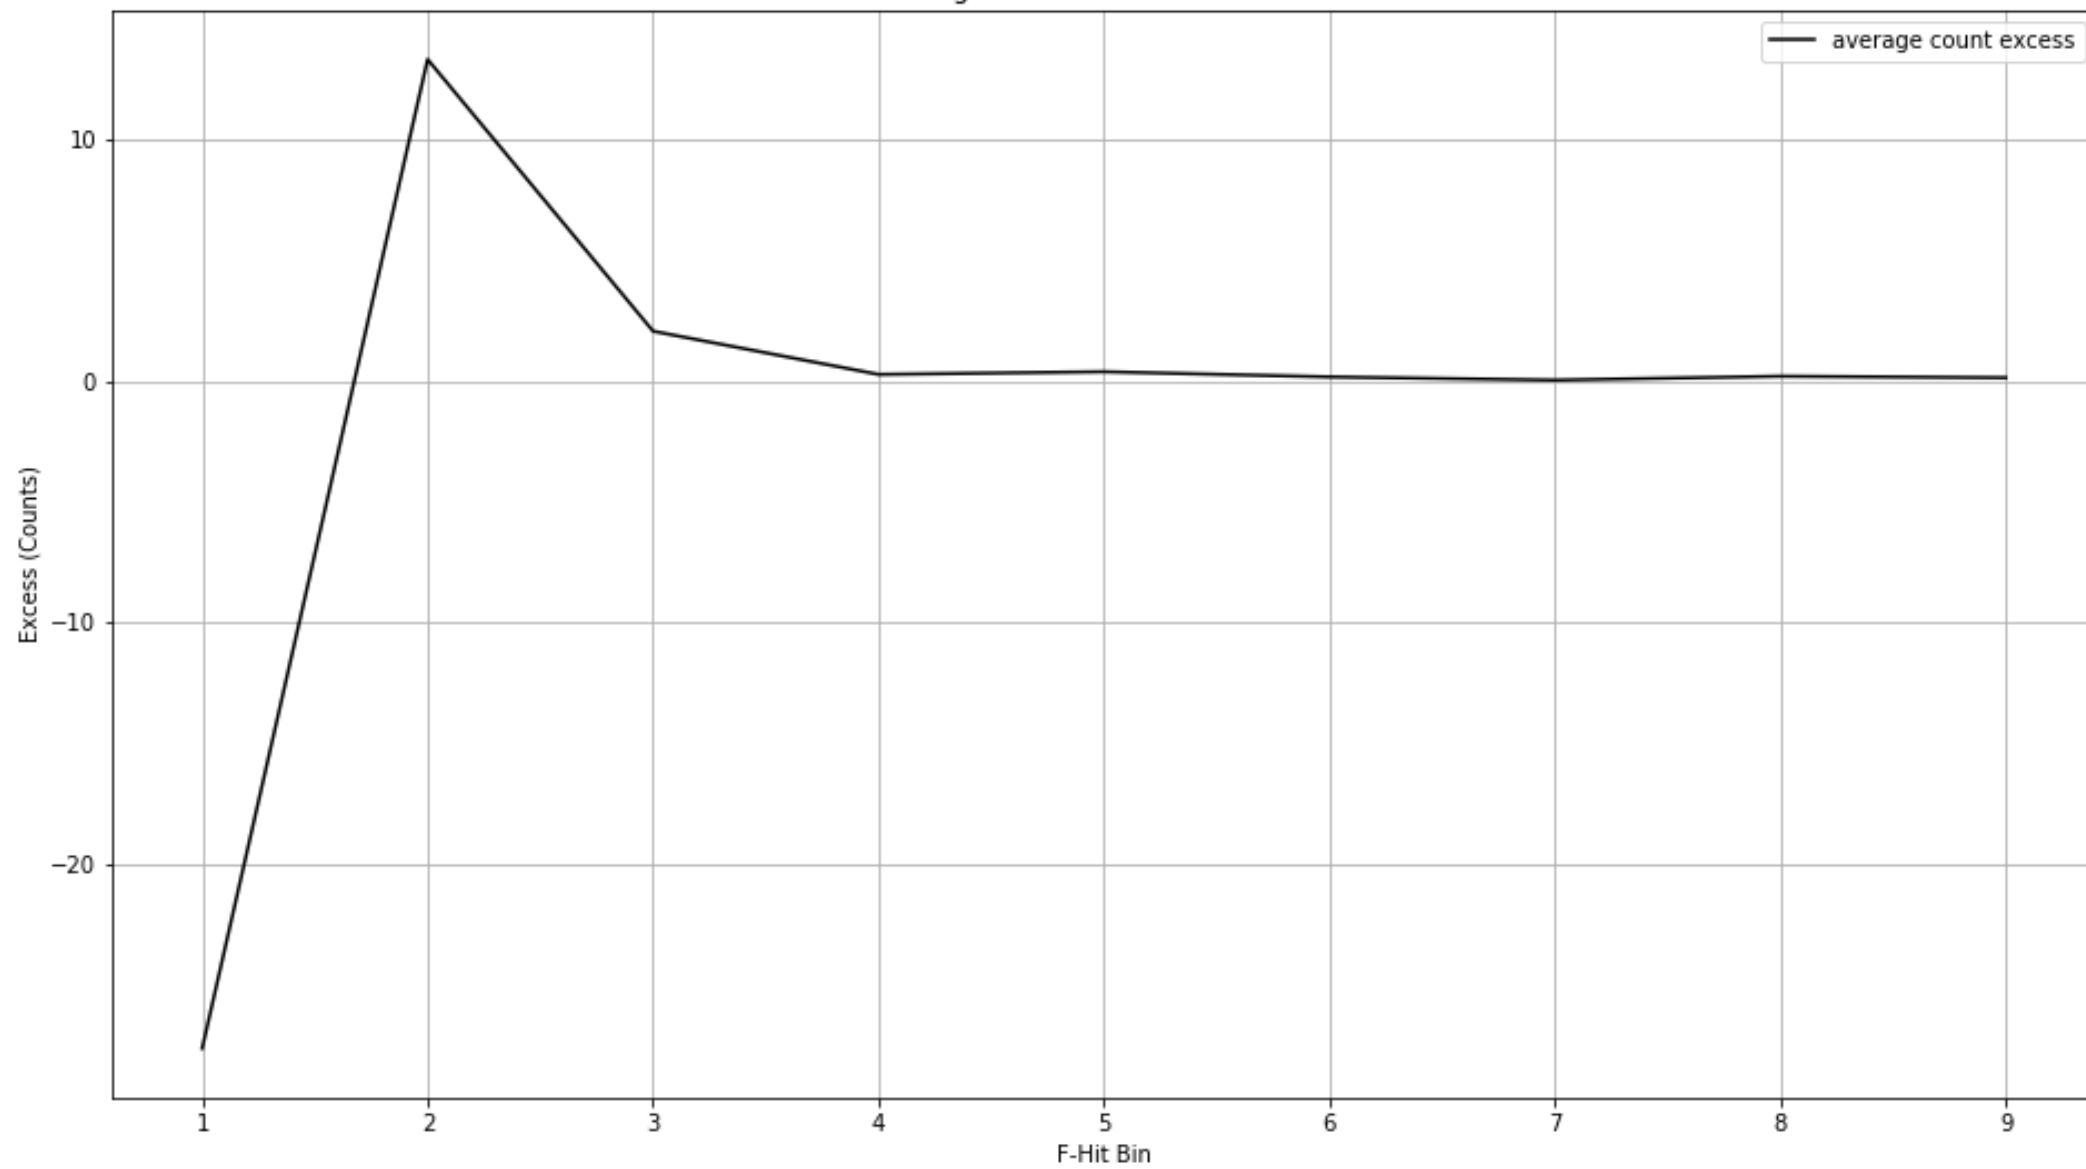

Cameron Blochwitz

9/26/19

Recap from last Week

- Last week I was able to get the Count Excess done
 - Count Excess was independent of spectrum
 - Makes sense as the counts are likely in the tree files themselves and the spectrum only affects the flux

Average Count Excess vs F-Hit Bin

This week

- Started working to modify a script to work with V392
 - Script seems to be self explanatory
 - I think the hardest part might be tuning the spectra to match what I want it to be
 - I have the source code for the spectra so hopefully it will just be plugging what I want
