

- 1 Large MC sample with curvature model 0 provided by Tolga as correction to previous large MC.
- 2 Candidate MC provided by John with Matthew's noise model and other changes to PMT simulation.

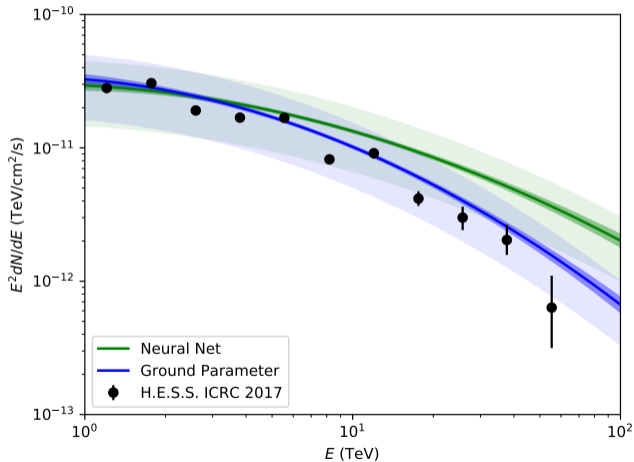

Curvature model 1

Curvature model 0

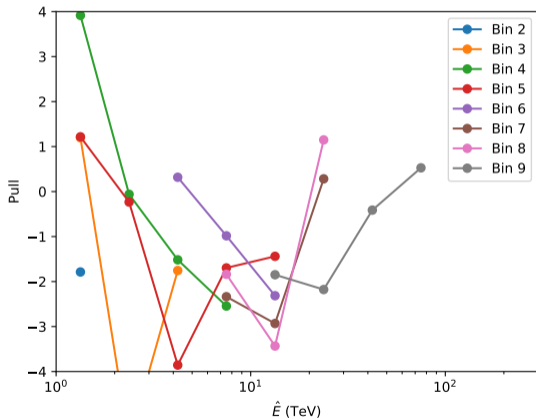

John's candidate (NN only)

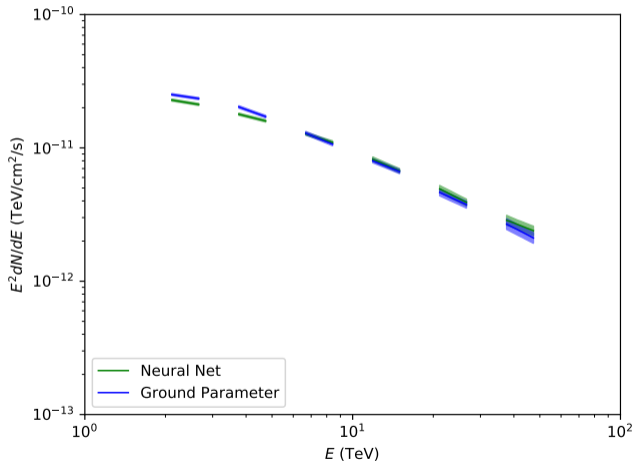

Why the change?

- Not sure about statistics of sample. If not large, PSF fit may have failed in less well populated bins.
- Could be actual bug. I'll talk to John.

Curvature model 0

John's candidate (NN only)
